

THE DRAMATURGY OF CREATIVE CODING

STORYTELLING AT THE INTERSECTION OF ART AND TECHNOLOGY

INDEX

Info-aesthetic

Data and the nature of narrative

Narrative vs. dramaturgy

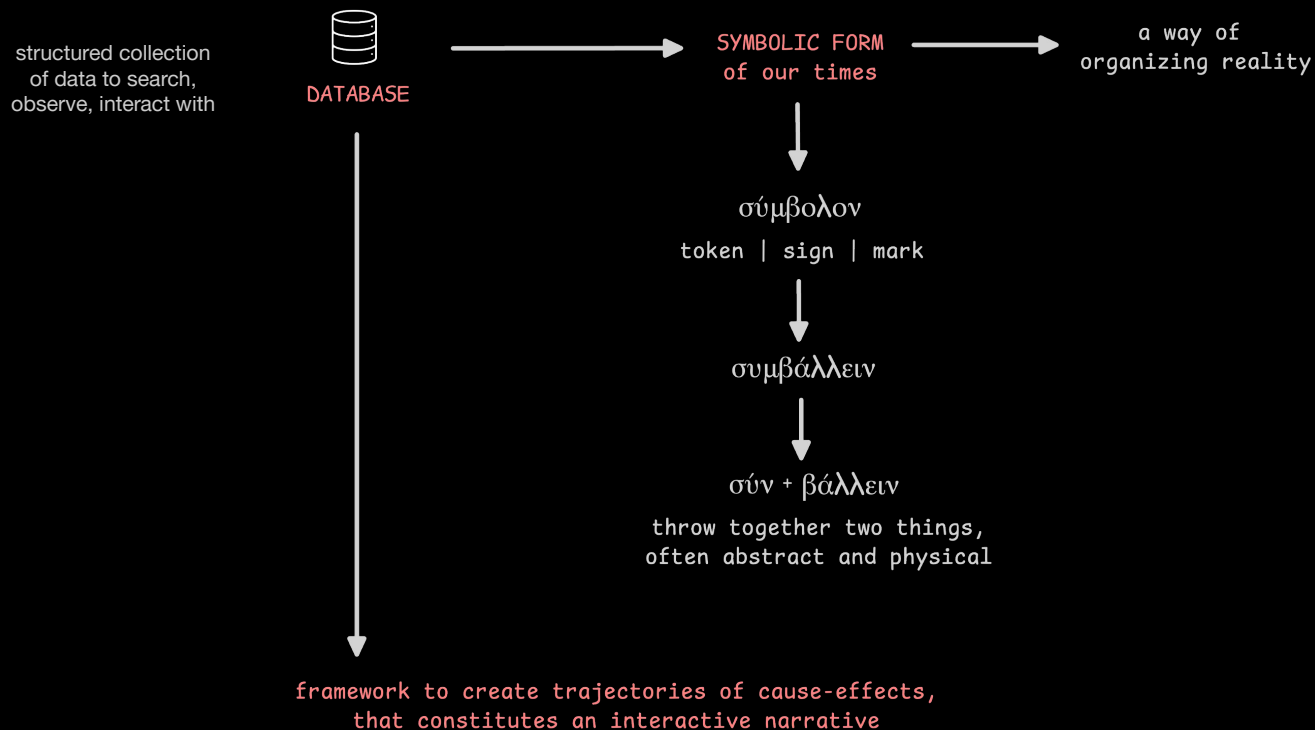

From data to audible events: μετά-διήγησις

Project analysis

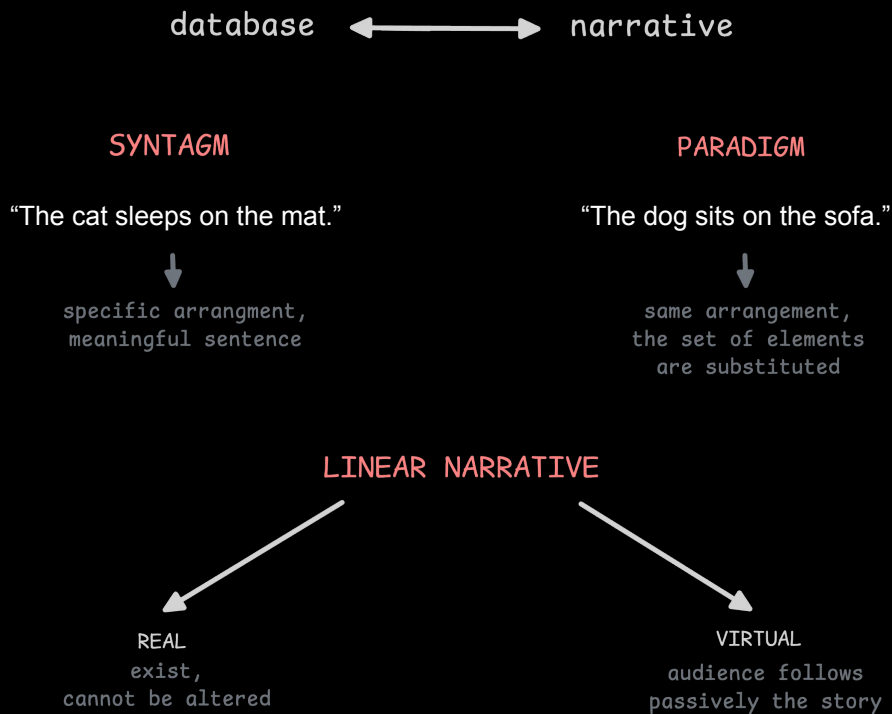

We are the invisible species

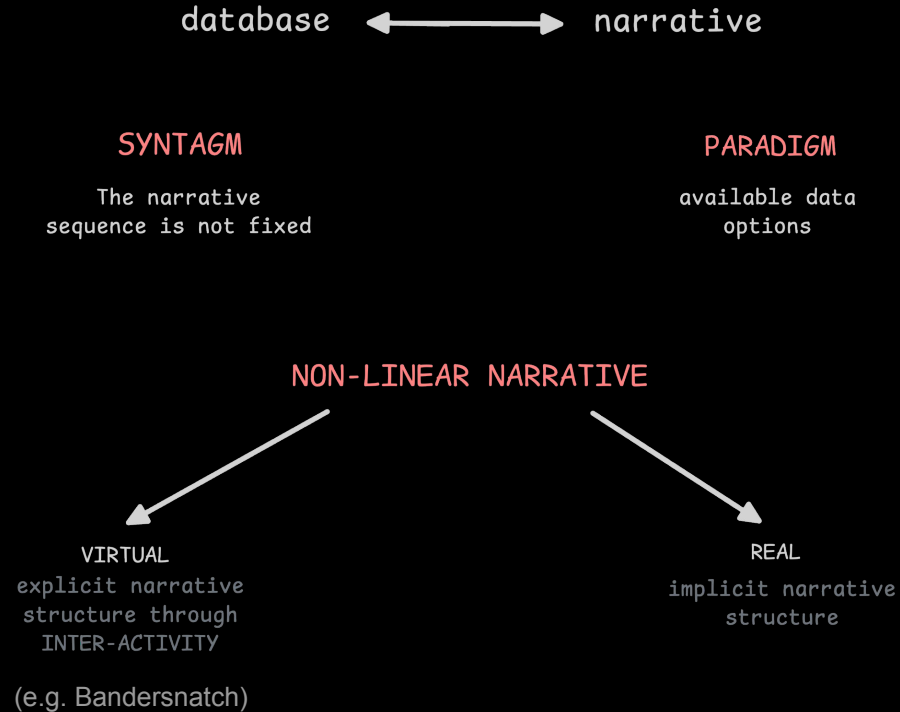

INFO-AESTHETIC: DATA AS AESTHETIC OBJECT

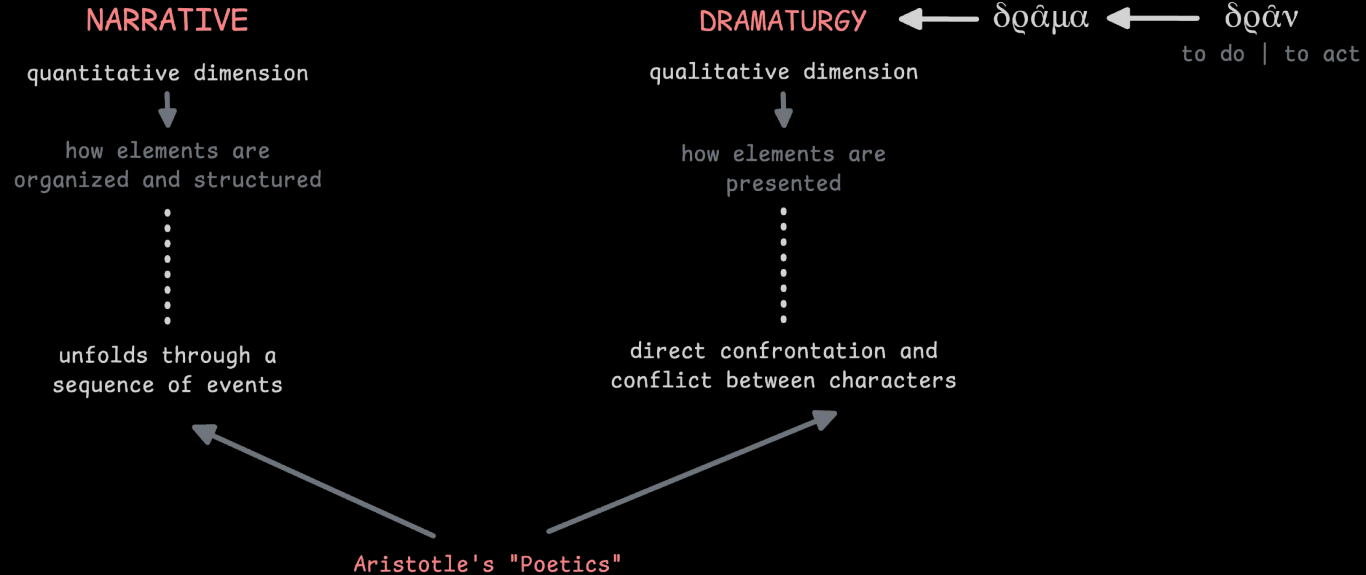

THE NATURE OF NARRATIVE IN TRADITIONAL MEDIA

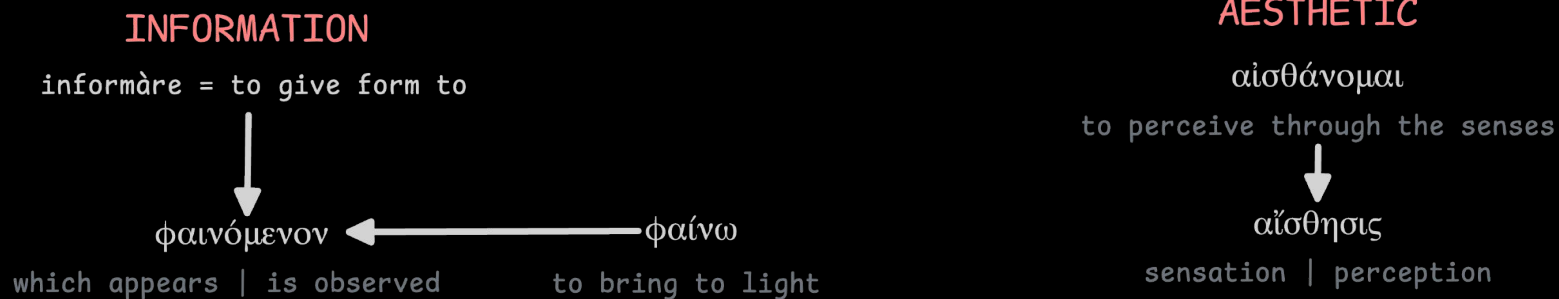

THE NATURE OF NARRATIVE IN NEW MEDIA

NARRATIVE VS. DRAMATURGY

INFO-AESTHETIC: THE ART OF DRAMATIZING INFORMATION

By giving form to a **φαινόμενον**, information transforms what is **observable** into something **measurable** and structured, allowing us to interact with it in a meaningful way.

Thus, **info-aesthetics** involves both the structuring of data (by giving form to a phenomenon) and the perception of this structured information through human sensory experience, merging the **measurable** with the **perceptual**.

FROM DATA TO AUDIO

AUDIFICATION: direct translation of raw data into sound (frequency | amplitude).

SONIFICATION: mapping data attributes to sound attributes (timbre | pitch | modulation).

MUSIFICATION: mapping data to musical principles (harmony | melody).

FORMS OF MUSIC NARRATION (διήγησης)

DIEGETIC: informative relationship between sound and image.

EXTRA-DIEGETIC: emotional | interpretative relationship between sound and image.

META-DIEGETIC: data re-contextualization | interpretation between data and sound.

ABOUT CREATIVITY

“The ability to come up with ideas or artifacts that are new, surprising and valuable”.

– M. Boden

PROJECT ANALYSIS

The screenshot displays the ANECA Studio environment. On the left, a project browser shows a patch named 'main.mspat' with various components like 'prepend makeRequest', 's request_city', and 'route response'. The central area features a visual programming patch with a 'DATA RETRIEVAL' section. A 'node.script' component is highlighted, showing the following JavaScript code:

```
const API_URL = "https://api.waqi.info/feed";
const API_URL_STATION = "https://api.waqi.info";

let data = {};

const dataFeed = (API) => {
  axios
    .get(API)
    .then((response) => {
      data = response.data.data;
      m.outlet("response", data);
    })
    .catch((error) => {
      console.log(error);
    });
};

// aqi
let aqi = "";
if (aqi !== data.aqi) {
  aqi = data.aqi;
  // m.post('aqi', {data.aqi})
  m.outlet("aqi", data.aqi);
}

// city
let city = {};
if (city !== data.city) {
  city = data.city;
  for (const key in city) {
    m.outlet("city", `${key}`, `${city[key]}`);
    // m.post('city', `${key}`, `${city[key]}`)
  }
}

// pollution data
for (const key in data.iq[0]) {
```

On the right, a web browser window displays the 'Lal Bahadur Shastri Nagar, Kalabur' Real-time Air Quality Index (AQI) page. The page shows a current AQI of 33, labeled 'Good', with a last update of 6 days ago on April 26, 2023. Below this, there are charts for the current past 2 days showing AQI values for PM2.5, O3, NO2, SO2, CO, Temp, Pressure, Humidity, and Wind. A map of the area is also visible, showing the location of Solapur and Kalaburagi.

Thank you!
